

MESHACK LEMPAYAN

Computer Science Student | Software Developer

Nairobi, Kenya | [meshacklempayan@gmail.com] | [+254 712 9333 73] | github.com/manlikegoose | [yourportfolio.com]

PROFILE

Computer Science student at Machakos University with hands-on experience across the full software development lifecycle — frontend interfaces, backend services, REST APIs, relational databases, automated testing, and Git-based collaboration. Comfortable moving between languages and frameworks to ship working software, with particular interest in backend systems, API design, and building practical, real-world tools. Quick to pick up new stacks, methodical about testing, and drawn to projects that solve a concrete operational problem rather than toy exercises.

EDUCATION

Bachelor of Science, Computer Science

2024 – Present

Machakos University, Kenya

- Relevant coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Software Engineering, Computer Networks, Operating Systems
- Actively building outside the classroom: shipping personal and team projects to reinforce coursework with production-style practice

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, TypeScript, Go

Frontend: HTML, CSS, React, Tailwind CSS, React Router, Vite

Backend: Node.js, Express, Django, FastAPI, REST API design

Databases: SQL, PostgreSQL, Supabase

Testing & Tools: Git, GitHub, Postman, automated/unit testing, HMAC signature validation, Linux, VS Code

PROJECTS

AttachHub — University Attachment Management System

- Designed and built a web platform that streamlines industrial attachment: opportunity postings, student applications, supervisor assignment, digital logbooks, and evaluation workflows
- Modeled relational data for students, hosts, placements, and logbook entries, and built role-based views for students, supervisors, and administrators
- Focused on replacing a manual, paper-based attachment process with a trackable digital workflow

Northstar Support Deflection MVP

- Built backend logic for order-status lookups and return-eligibility checks to reduce repetitive customer-support tickets
- Wrote test data and automated tests to validate business rules (return windows, order states) before integration
- Structured the service so support logic could be reused by a chat/deflection frontend without duplicating rules

Meridian Inventory Sync Prototype

- Built a Go prototype that receives inventory webhooks, validates HMAC signatures for authenticity, and caches stock levels for fast reads
- Exposed a lightweight API for querying current inventory, decoupling downstream consumers from the webhook source
- Focused on correctness under untrusted input: signature verification and defensive parsing of incoming payloads

Mesh Portfolio

- Personal portfolio site showcasing projects, skills, and contact information with a responsive, mobile-first layout
- Built with React and Tailwind CSS, deployed as a static site

RELEVANT EXPERIENCE

Software Development & Team Projects

- Collaborated on team projects covering requirements analysis, backend development, API integration, and testing
- Used Git branching workflows (feature branches, pull requests, code review) to coordinate work across contributors
- Debugged issues across the stack and adapted implementations as requirements changed mid-project
- Practiced iterative development: shipping a working version early, then refining based on feedback and testing

CORE STRENGTHS

- Problem solving and debugging
- Team collaboration and Git workflows
- Backend and API development
- Responsive web development
- Fast learning and adaptability
